

ACCESSORY INFORMATION

LATERAL THRUSTER

The VideoRay Lateral ROV Thruster attachment is a simple plug and play accessory designed to give the Pro 4 ROV Pilot additional thrust options sometimes preferred during lateral inspections.

The lateral thruster can be attached or removed in seconds and works with existing VideoRay accessories such as the manipulator arm or sonars. The lateral thruster is controlled from an assigned button or knob on the existing hand controllers for seamless integration into the Pro 4 system.
