» CONSULTANT

**VIPS 2012**  
OCTOBER 22-24, 2012

# Introduction

- **Tom Wrasse – Underwater Warden**
  - Certified VideoRay Instructor, Pilot and Consultant
  - 30 years experience in law enforcement with the Wisconsin Department of Natural Resources
  - VideoRay end user

## UNDERWATER WARDEN

INVESTIGATION ♦ INSPECTION ♦ RECOVERY

**VIPS 2012**  
OCTOBER 22-24, 2012

# Objectives

- Drowning Statistics
- ROV background
  - Classification types
  - Applications
  - Accessories
- Searches
  - Basics
  - Tactics
- Recoveries
- Training
- Case study information

# Statistically Speaking

- Worldwide<sup>1</sup> - estimates
  - 1063 unintentional drowning/day ~390,000/yr
  - Ranks 3<sup>rd</sup> for causes of unintentional deaths
  - 96% occur in low – middle income countries
  - The highest rates are found in the regions of Africa, China and India

# Statistically Speaking

## ■ United States

- 10 drowning/day<sup>2</sup>, ~3650/yr
- Ranks 5<sup>th</sup> for causes of unintentional deaths<sup>2</sup>
- 1 in 5 or 20% are less than 14 years of age<sup>3</sup>
- 80% are male<sup>3</sup>
- \$273 million (USD) in associated costs<sup>1</sup>

# Statistically Speaking

## ■ Canada

- 1.3 drowning/day<sup>9</sup>, ~467/yr
- Ranks 4<sup>th</sup> for causes of unintentional deaths<sup>9</sup>
- 15% are less than 14 years of age<sup>9</sup>
- 83% are male<sup>9</sup>
- \$173 million (USD) in associated costs<sup>1</sup>

# Statistically Speaking

## ■ Australia

- .78 drowning/day<sup>7</sup>, ~285/yr
- \$85.5 million (USD) in associated costs<sup>1</sup>
- 77% are male<sup>7</sup>
- 16% are 14 years of age or less<sup>7</sup>

# Statistically Speaking

- United Kingdom<sup>8</sup>
  - 1.9 drowning/day, ~700/yr
  - 68% are male
  - 10% are 15 years of age or less

# Risk Factors to Natural Water Drowning

- Swimming ability
- Failure to wear life jackets – 88% of those that drown related to a boating accident did not wear a life jacket <sup>4,5</sup>
- Alcohol use – 70% of water related accidents involve alcohol<sup>3,4,6</sup>

# Cold Water Drowning

- <58 F/14C
- 90 minutes
- Mammalian diving reflex
  - Shut down in order
  - Begins when the face hits the water

# Remotely Operated Vehicles (ROV)

## Classifications:

- Work Class – large vehicles, heavy payload capability, multi-person crews

# Remotely Operated Vehicles (ROV)

## Classifications:

- Observation Class – small suitcase sized, lightweight, portable, easily deployed by one person

Photo: Mr. Msanobu Shibuya

# Remotely Operated Vehicles (ROV)

## Classifications:

- Special Use – built for a specific task, not very common due to high associated costs

# Remotely Operated Vehicles (ROV)

Observation Class – further defined

- Micro - very small, “hobby” type, primarily a swimming eyeball used for inspections, shallow depths
- Mini – small, equipped with camera, lights, manipulator and sensors

# Remotely Operated Vehicles (ROV)

## Applications:

- Inspection
- Observation
- Documentation
- Recovery
- Sensory Platform

# Remotely Operated Vehicles (ROV)

Application Fields (to name just a few):

- Aquaculture
- Law Enforcement
- Offshore Oil and Gas
- Military
- Science and Research
- Potable Water Supply
- Infrastructure

# Accessories to the mini-ROV

## Video

- Front high resolution color camera with tilt, rear/external black and white
- HD is available with some modifications
- Has snapshot capability
- Video enhancements

# Accessories to the mini-ROV

## Lights

- LED's
- Video quality is improved where the lights are mounted separate of the camera
- Provide excellent dimming capability

# Accessories to complement the mini-ROV

## Sonar

- Ability to “see” beyond the video
- Frequencies dictate the end result
- Practice required to interpret images

## Sonar Types

- Side Scan
  - Towed
  - Hull mounted
  - GPS capabilities

Side scan

# Accessories to the mini-ROV

## Sonar Types

- Mechanical Scanning
  - ROV mounted
  - Fixed mounted

**BlueView**<sup>®</sup>  
TECHNOLOGIES

# Accessories to the mini-ROV

## Manipulators

- There is a wide range of manipulators available for most ROV's
- Typically single function
- Attachments for cutting heads
- Used in rescues/recoveries

# Accessories to the mini-ROV

## Tracking/Navigation Systems

- Acoustic – interprets sound pulses through pingers, transponders and responders
  - Long Baseline - LBL
  - Short Baseline - SBL
  - Ultra Short Baseline - USBL

# SBL Positioning System

# Accessories to the mini-ROV

## Tracking/Navigation Systems

- Non-acoustic
  - Tether based – uses a series of sensor embedded nodes
    - Acceleration - distance
    - Magnetics - direction
    - Rate-gyro – position
  - Provides position history
  - GPS enabled

# Searches

## Where to begin

- **Point Last Seen** – interviewing as many “witnesses” as possible
  - Triangulate
  - Mark the spot
  - Eliminate sectors
- Gather all the facts prior to entering the water

# Searches

## Where to begin

- What area to search
  - Wind, current, tide, water depth
  - Victim descent
    - Without current
    - With current
- Bayesian Search Theory<sup>10</sup> – concept of evidential probability through mathematics
  - Measurable, mapable, obtainable

Without current

# Searches

## Where to begin

- Method to search
  - Apply the tools right for the job
  - Adjust the job to the tools available
  - Side Scan – large area coverage
  - Scanning – mid range coverage
  - Tracking/navigation system – ensures complete coverage
  - ROV w/video and sonar – small search areas and target truthing
  - Targets need to be marked

# Searches

## Search tactics

- Search Area

- Divided into smaller sections

- Primary – secondary sections

- Documentation – systematic coverage identifying sections completed and those yet to be

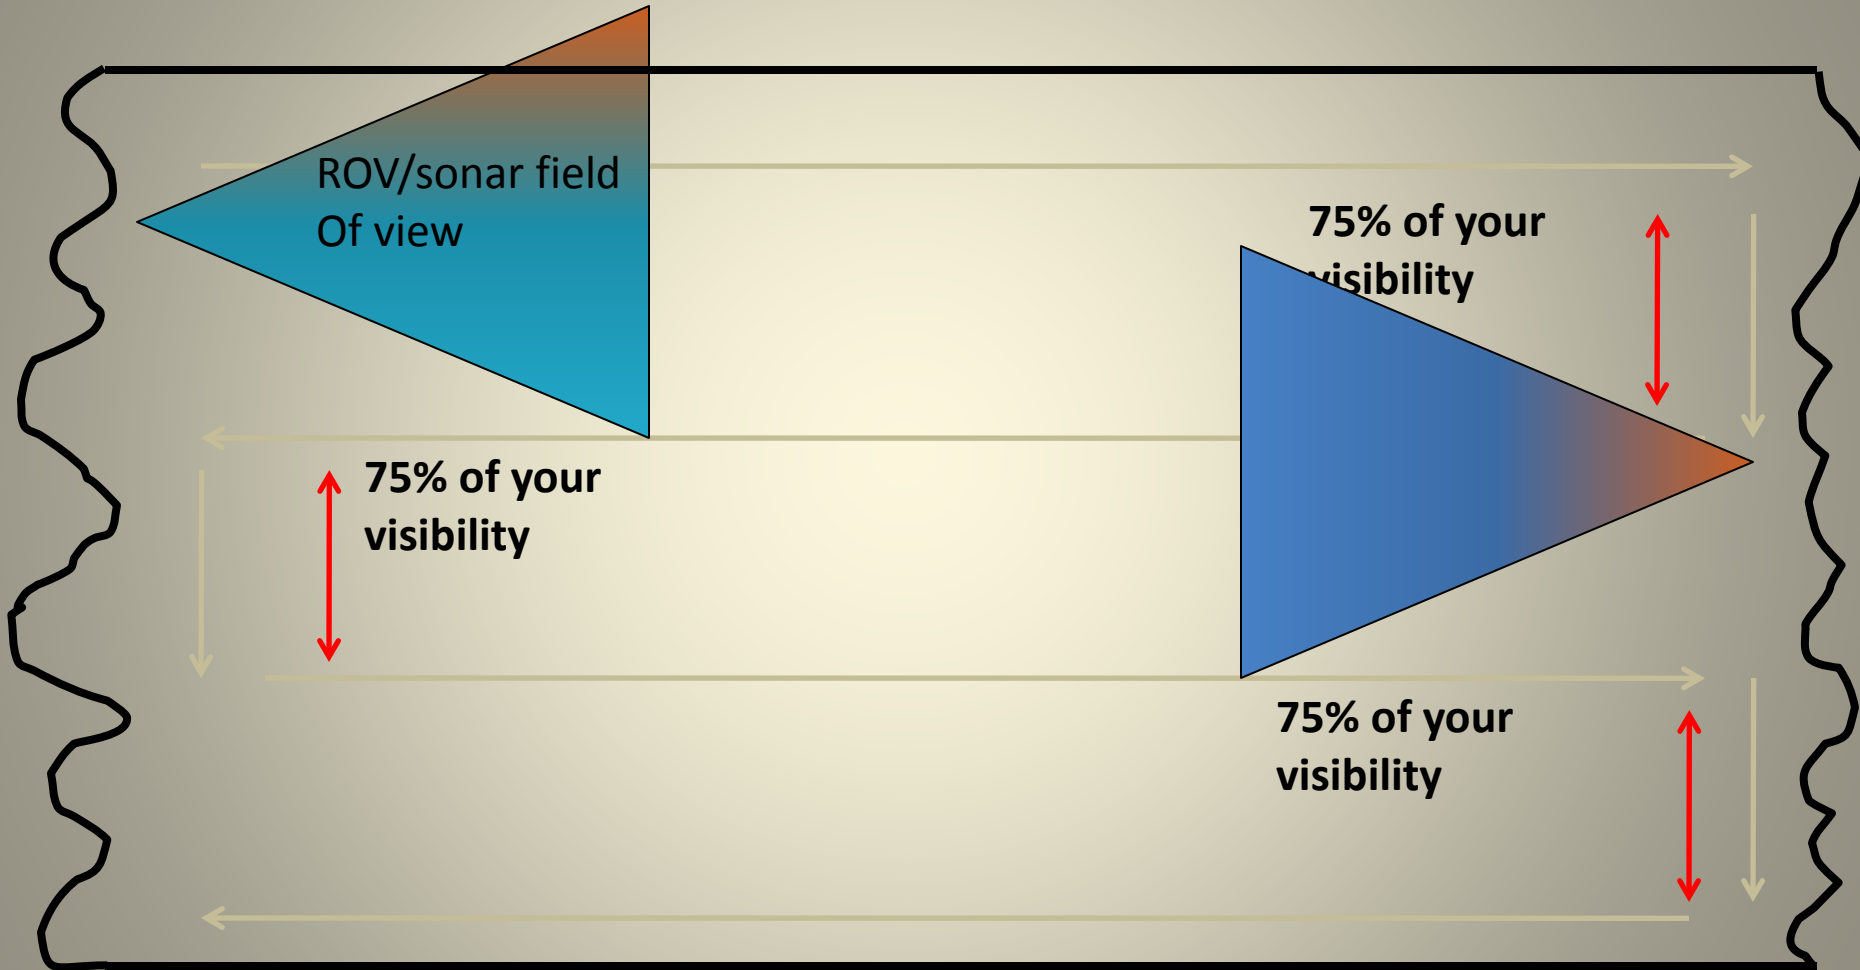

# Searches

## Search tactics

- Search Patterns
  - Overlap field of view - ~75%
  - Parallel tracks – back and forth
  - Fan/arc – a series of concentric arcs
  - Circle – a series of concentric circles

# Parallel Track Pattern

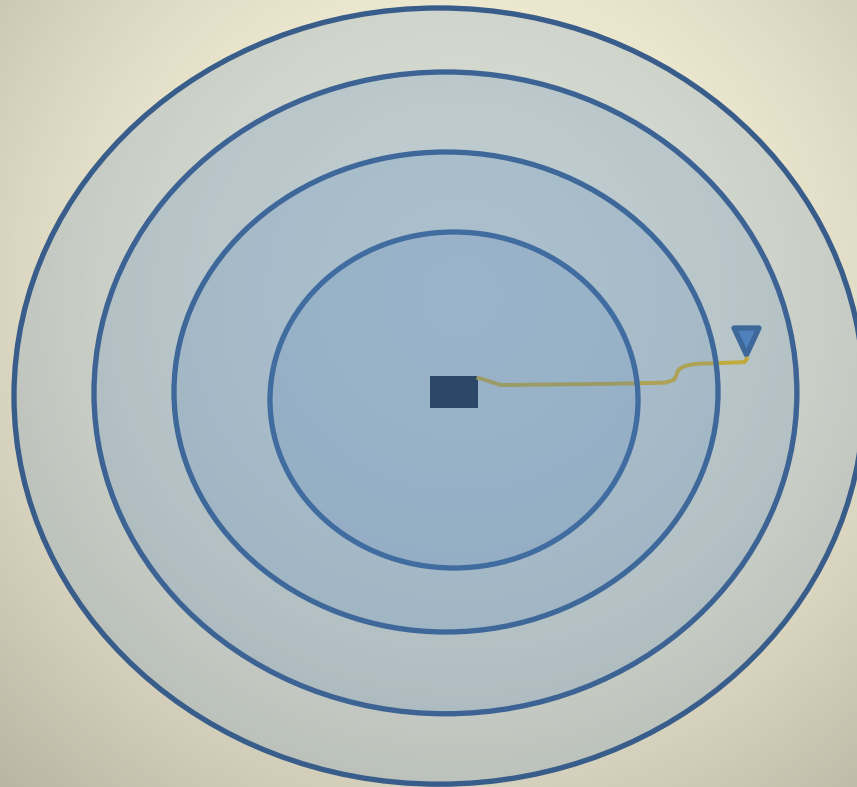

Fan/arc Pattern

# Circle Pattern

# Operations

Shore based  
Vessel  
Power Source

Wall outlet

Inverter

Generator

# Searches

## Search tactics

- Target Marking
  - Buoys – surface markings
  - Acoustic – subsurface markings
    - Active – pingers that broadcast a signal to a tracking system
    - Passive – reflect sonar waves
  - Tracking/navigation – known fixed point that can be duplicated
  - Holding location

# Recoveries

## Techniques

- Diver descent – following the tether to the target
- Grip and pull – manipulator and tether used to retrieve the target
- Recovery lines
  - Hooking
  - Threading
  - Wrapping

# Training

- Vendor
- In-house
- Refreshers

# Case Studies

Rescue

Retention Pond

Marina

Helicopter

Royal Netherlands Navy

# Numbers

Vendors – only one vendor contacted provided numbers

- VideoRay – 40-50 recoveries made
- Agencies
  - SARbot UK –
  - St Louis County Sheriff Rescue
  - Wisconsin Department of Natural Resources
- Individuals
