

# Accessory Data Sheet

## Tether Backpack

The **Tether Backpack** makes transporting your VideoRay ROV System even easier. This must-have accessory keeps tether organized and safe from harm while not in use, while still leaving both hands free to carry other gear. With enough room to store both 40 m (130 ft) of PPT and a 76 m (250 ft) of standard neutral tether, the Tether Backpack is the perfect tether management solution for ROV pilots who don't need the capacity of a full Tether Deployment System.

The Tether Backpack also includes a removable soft-sided zippered sack for storing tools (tools not included) or other ROV essentials. The Tether Backpack can be worn backpack-style, or carried by its top handle.
